Using WDM channel diversity: all-pair fusion versus hard selection
15 channels; nominal B = 21.97 kHz
RMSE (km)
Mean per-component energy SNR (dB)
single pair (largest |D|)
equal, all pairs
D^2, all pairs
robust, all pairs
equal, filtered ($\alpha = 0.25$)
5-km target
Matched-accuracy comparison
Energy SNR for 5-km RMSE (dB)
Number of equispaced channels
A missing point means the target was not reached
