A hard cutoff removes pairs; $D^2$ weighting changes their influence
Pair-dispersion distribution
Normalized dispersion $|D|/D_{max}$
$10^0$
$10^{-1}$
$10^{-2}$
Equispaced (15 ch)
Alternating band-edge (12 ch)
cutoff $|D|/D_{max} = 0.5$
0.0
0.2
0.4
0.6
0.8
1.0
Fraction of pairs, sorted by decreasing $|D|$
Cumulative D-squared weight at alpha=0.25 cutoff
Cumulative share of total $D^2$ weight
32/105 pairs; 26.2% weight excluded
36/66 pairs; 0.0112% weight excluded
Equispaced (15 ch)
Alternating band-edge (12 ch)
Fraction of highest-$|D|$ pairs included
